ABOUT ME

Computer Science graduate (University of Guelph) and Junior Software Developer based in Kitchener, ON. Full-stack development in TypeScript, Python, and PHP, with every personal project self-hosted and shipped to production on a 3-machine homelab running Docker, Traefik, and Cloudflare Tunnels.

EXPERIENCE

- **Junior Software Developer** Remote
IDT (promoted from Junior Software Engineer Intern, Jun 2026 – Aug 2026) *Jun 2026 – Present*
 - Built an approval-gated internal portal for the Ad Ops team to adjust per-supply-tag ad request pacing, with a role-based submit/approve workflow and a full audit trail.
 - Backend in PHP 8.3 / Slim 4: an API-only service layered into Domain / Infrastructure / Http, with PostgreSQL for base config, Redis for overrides, hand-wired DI, an OpenAPI spec, and Google OIDC sign-in.
 - Frontend in Svelte 5 + TypeScript (Vite): a standalone SPA with runes-based stores and a typed API client, served same-origin behind Nginx.
 - Covered by PHPUnit unit and Testcontainers integration suites plus Vitest, shipped via Docker builds with CI running lint, PHPStan, and tests.
- **3D Printing Production** Kitchener, ON, Canada
toremember.gift – Family-run Personalized Gifts & Keepsakes *Nov 2025 – Jun 2026*
 - Ran production and fulfillment for a family-run 3D printing business alongside full-time studies: multi-material printing, machine maintenance, order fulfillment, and deliveries.

PROJECTS

Self-hosted end-to-end on a 3-machine homelab (Proxmox VMs, Docker, Traefik reverse proxy, Cloudflare Tunnels, Dokploy). More at www.hugoprado.dev.

- **WatchMage** – watchmage.hugoprado.dev | *Next.js, TypeScript, React, Vitest*: PC gaming dashboard aggregating 4 live sources (Steam store and appdetails APIs, 3 news RSS feeds) behind cached API routes; 13k+ lines with unit and component test coverage.
- **Job Application Tracker** – demo-job-tracker.hugoprado.dev | *React, FastAPI, PostgreSQL, Docker*: Full-stack pipeline tracker with JWT auth, async SQLAlchemy, and Alembic migrations, deployed via Docker Compose behind Nginx.
- **AI Homelab** | *Ollama, Docker, Traefik, SQLite*: Self-hosted a 12B-parameter LLM (Gemma 3) on personal hardware and exposed it as a private, reverse-proxied service for local AI experiments.

TECHNICAL SKILLS

- **Languages**: JavaScript, TypeScript, PHP, Python, C, Java, SQL, HTML, CSS, Bash
- **Frameworks & Libraries**: React, Next.js, Svelte 5, Node.js, Express.js, Tailwind CSS, FastAPI, Slim 4
- **Databases**: PostgreSQL, Redis, SQLite, MongoDB
- **Developer Tools**: Git, GitHub, GitHub Actions, CI/CD, Docker, Make, Vite, Vitest, PHPUnit, PHPStan, Postman
- **AI & LLMs**: LLM API integration, local model deployment (Ollama, LM Studio), prompt engineering, AI-assisted development
- **Infrastructure**: Proxmox, Traefik, Cloudflare Tunnels, Dokploy, Nginx, Linux server administration

EDUCATION

- **University of Guelph** Guelph, ON, Canada
Bachelor of Computing (B.Comp.), Computer Science *Sep 2021 – Aug 2026 (Graduated)*
